Genome-based analysis of virulence genes in a non-biofilm-forming

XT Genome-based analysis of virulence genes in a non-biofilm-forming

XT Staphylococcus epidermidis strain (ATCC 12228).";

Mol. Microbiol. 49:157-1593 (2003).

-I- CATALYITC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP +

phosphate + L-glutamate + carbamoyl phosphate.

-I- CATALYITC ACTIVITY: 2 ATP + L-glutamine | COFACTOR: Binde 3 manganese inns per subunit (By similarity).

-I- PATHWAY: Arginia biosynthesis.

-I- PATHWAY: Arginial biosynthesis.

-I- PATHWAY: Composed of two chains; the small (or glutamine) chain

promotes the hydrolysis of glutamine to ammonia, which is used by

the large (or ammonia) chain to synthesize carbamoyl phosphate (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pfam; Froz.

L. CATALYIC ACTIVITY: 2 AFP + L-glutamine + CO(2) + H(2)O = 2 ADP +
Diosphate + L-glutamiate + Garbamoyl phosphate (By Similarity).
L. CATALYIC ACTIVITY: 2 AFP + L-glutamine (By Similarity).
L. PATHMAY: Arginiae biosynthesis.
L. PATHMAY: Arginiae biosynthesis function ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By Similarity).
L. SIMILARITY: Belongs to the carB family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28-FEB-2003 (Rel. 41, Created)

                                                                                                                                      Lancet 357:1225-1240(2001).

-!- CATALYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP + Dosphate + L-glutamate + carbamoyl phosphate.

-!- CATALYTIC ACTIVITY: 3 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP + Dosphate + L-glutamate + carbamoyl phosphate.

-!- PATHWAY: Arginine biosynthesis.
-!- PATHWAY: Pyrimidine biosynthesis, first step.
-!- PATHWAY: Composed of two chains; the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By
Kanehisa M., Yamashita A., Oshima K., Furuya K., Yoshino C., Shiba T., Hattori M., Ogasawara N., Hayashi H., Hiramatsu K.; "Whole genome sequencing of meticillin-resistant Staphylococcus aurents.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

-i-CATALYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP + phosphate + L-glutamate + carbamoyl phosphate.

-i-COFACTOR: Binds 3 manganese ions per subunit (By similarity).

-i-PATHWAY: Arginine biosynthesis.

-i-PATHWAY: Arginine biosynthesis, first step.

-i-SUBUNIT: Composed of two chains; the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By similarity).

-i-SIMILARITY: Belongs to the carB family.
                                                                                                                                                                                               MEDLINE-22040717; PubMed=12044378;

-I- FUNCTION: REV APPEARS.

-I- FUNCTION: REV APPEARS.

NEGATIVE REPRESSION OF GAG AND ENV PRODUCTION.

-I- SUBCELLILAR LOCATION: Nuclear; accumulates in the nucleoli.

-I- PTM: Phosphoprotein whose state of phosphorylation is mediated by a specific serine kinase activity present in the nucleus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=90259077; PubMed=2188136;

T. Complete genome sequence of Methanobacterium thermoautotrophicum

deltaH: functional analysis and comparative genomics.";

T. GATALYTIC ACTIVITY: ATP + xanthosine 5'-phosphate + L-glutamine +

H(2)0 = AMP + diphosphate + GMP + L-glutamate.

- I - PATHMAY: GMP biosynthesis.

- I - PATHMAY: GMP biosynthesis.

- I - SUBUNIT: Heterodimer composed of a glutamine amidotransferase

subunit (A) and a GMP synthase subunit (B) (Potential).

invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "Norvalyl carbonyl forming keto-amide linkage with residue 7^{\rm n}

                                                                                                                                                                                                                                                                                             /note= "Norvalyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Sequence 11 AA;

The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketcamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

The peptides of the invention are alpha-ketcoande peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                          Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide; virucide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ptide compound having hepatitis C virus protease inhibitory useful for treating disorders associated with hepatitis C
                                                                                                                Hepatitis C virus NS3/NS4a serine protease inhibitor peptide #37.

                                                       /note= "Norvalyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) proctease inhibitory activity. The peptides of the invention are alpha *ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

The peptides have virucide activity, and are useful for treating and in the manufacture of an amedicament to treat disorders associated with NCV protease. A pharmaccutical composition comprising the peptide as an active ingredient is useful for treat associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Norvalyl carbonyl forming keto-amide linkage with

                                                                                                                                                                                                 The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketocamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A

The sequence represents a peptide compound of the invention having hepatitis C virus (HCV) protease inhibitory activity. The peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C virus protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                note= "Norvalyl carbonyl forming keto-amide linkage with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                    The sequence represents a peptide compound of the invention having the peptides of virus (HCV) protease inhibitory activity. The peptides of the invention are alpha ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmacceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence represents a peptide compound of the invention having the peptides of the peptides of the peptides of the invention are alpha-ketoamide peptide analogues. The peptides have virucide activity. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

The peptides of the invention are alpha-ketocamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents a peptide compound of the invention having the peptides of the invention are alpha **Retorate inhibitory activity. The peptides of the invention are alpha **Retorande peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus

```
The sequence represents a peptide compound of the invention having the peptides of the peptides of the peptides of the invention are alpha *ketoamide peptide analogues. The peptides have virucide activity, and are useful for treating and in the manufacture of a medicament to treat disorders associated with HCV protease. A pharmaceutical composition comprising the peptide as an active ingredient is useful for treating disorders associated with hepatitis C virus
                                                                                                                             /note= "Norvalyl carbonyl forming keto-amide linkage with residue 7"
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel peptide compound having hepatitis C virus protease inhibitory activity useful for treating disorders associated with hepatitis C virus protease.
Hepatitis C virus; HCV; serine protease; inhibitor; alpha-ketoamide;
virucide.
                                                                                                     'note= "N-terminal acetyl"

Sequence 4318, Application US/09134000C

Patent No. 6617156

GENERAL INFORMATION:

APPLICATY: Lynn boucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BATE: 02796-032

CURRENT FILING DATE: 1998-08-13

CURRENT FILING DATE: 1998-08-13

FRIOR PAPLICATION NUMBER: US 60/055,778

FRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: Patentin version 3.1

SEQ ID NO 4318

LENGTH: 303
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

TITLE OF INVENTION: NOVEL PEPTIDES AS NS-3-SERINE PROTEASE INHIBITORS OF HEPATITIS C
FURRENT PEPERENCE: IND132-US
CURRENT FILING DATE: 2003-03-25
PRIOR APPLICATION NUMBER: 60/220,101
PRIOR PILING DATE: 2000-07-21
NUMBER OF SEQ ID NOS: 62
SOFTWARE: Patentin version 3.1

Vad 452

Val protein - tobacco yellow dwarf virus (strain Australia)

C; Species: tobacco yellow dwarf virus

C; Species: 15-dan-1993 #sequence_revision 15-Jan-1993 #text_change 08-Oct-1999

C; Accession: A42452

R; Morris, B.A.M.; Richardson, K.A.; Haley, A.; Zhan, X.; Thomas, J.E.

A; Tricle: The nucleotide sequence of the infectious cloned DNA component of tobacco yell: A; Reference number: A42452

A; Accession: A42452

A; Accession: A42452

A; Molecule type: DNA

A; Residues: 1-102 < MOR>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disease resistance protein rpp8 [similarity] - Arabidopsis thaliana

RI "HRT gene function requires interaction between a NAC protein and properties to confer resistance to turnip crinkle virus.";

RI viral capial parients confer resistance to turnip crinkle virus.";

RI Plant Call 12.1917-1926(2000).

- :- FUNCTION: Disease resistance protein. Resistance proteins quard the plant against pathogens that contain an appropriate avirulence protein via an indirect interaction with this avirulence protein. That triggers a defense system including the hypersensitive contexponse, which restricts the pathogen growth. The interaction with TIP (TCV-interacting protein) may be essential for the recognition of the avirulence proteins, and the triggering of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright.
